

arise. The word "fraternity" is mentioned in the Constitution's preamble, as an aspirational goal for the newly

the society. There are, therefore, serious problems with the court's stated justifications for upholding the con-

## Should you take that genetic test?

Ever since science has shown them to be the chemical code that builds bodies, genes are usually only associated with irrevocable maladies. Huntington's disease, which is a fatal disorder of the nervous system, Fragile X syndrome, or sickle-cell anaemia are severe afflictions that result from a single rogue gene being passed on down the generations.

To Anu Acharya, chief executive officer, Mapmygenome, genes are more than fatal passports. Her Hyderabad-based company offers users, for Rs.25,000, a chance to get their genes mapped. Other than propensity to genetic diseases, Ms. Acharya's Genomepatri — as the test is called — tells you about your vulnerability to liver, kidney diseases and "nicotine" and "alcoholism" and even "caffeine consumption" and "athletic ability." Interpreted correctly, reading your genome is like a horoscope that can reveal hidden insights and help you live healthier and happier, according to her.

"If you have two-three members with diabetes in your family, there's nearly an 80 per cent chance of you contracting the condition too... you don't need a genetic test for that," says Vinod Scaria, a clinician-turned-geneticist who works on finding the genetic roots of rare diseases. Mr. Scaria and his colleague Sridhar Sivasubbu, at the Delhi-based Institute of Genomics and Integrative Biology, have over the years organised a network of doctors across the country — called GUARDIAN — to help map individuals and families afflicted with rare diseases that may have a strong genetic component. The idea is that over time new genes, or variations of known genes are discovered that will be useful to design better drugs or sometimes use known drugs in new

ways to find cures for hitherto untreatable diseases. A doctor from Pune, for instance, got in touch with the GUARDIAN team to report a child with skin like fish scales. "A man and his wife, both healthy, had two children with the same problem. We found it was a result of a genetic condition, so rare that it afflicts 1 in 200,000 people," says Mr. Sivasubbu.

gapore. Jointly organised by the Vivekananda Seva Sangh (VSS) and Global Indian International School (GIIS), the aim of the festival is to encourage the children and youth in Singapore to embrace and play more outdoor games and promote the legacy of Indian traditional games such as Kabaddi, Kho Kho, Gilli-danda and Langadito name a few.

Both organisers, VSS and GIIS, were appreciative of the encouragement provided by the Singapore Government in organising such community events, which exemplify the multi-cultural fabric of Singapore and offer people from all walks of life the opportunity to participate in and learn about

National General Secretary of the Bharatiya Janata Party (BJP). "Many of these traditional games have lost importance in India and so it is a great initiative by the organisers," he adds.

Mr Atul Temurnikar, Executive Chairman and CEO of Global Schools Foundation, said, "We will be taking this event to other Asian countries from next year and will be conducting it on a bigger scale with more corporate sponsors. These games reflect the identity of Indian culture, which is rich and deeply rooted among Non-Resident Indians overseas. ITGF is more than a festival, it is the culmination of sports and culture."
